

FLOW: UNIQA Health Insurance Intelligent Conversion Coach

BY 4THRIVES

May 31st, 2026

What's the problem?

- low conversion rates
- no personalized approach
- unknown reason for the drop-off of the clients

Stage	Trigger	Drop-off Rate
Tariff selection	Initial price display	66%
Add-on selection	Additional expences	24%
Personal data input	Final price	78%
Total	Conversion rate	5.6%

What we've created

THE BROWSER-BASED EXTENTION THAT INTEGRATES INTO QNIQA'S ONLINE CALCULATOR

Helps

The solutions offered need to be based on sound market decisions so that they can have an impact.

Hints

Give an explanation that the solutions offered are based on data and analysis that are very precise and focus on the problem.

Simulates

The solutions offered need to be based on sound market decisions so that they can have an impact.

Welche Leistungen soll Ihre Privatarzt-Versicherung abdecken?

Denken Sie an Ihren heutigen Bedarf, nicht an den in 20 Jahren.

Nach 3 Jahren können Sie in einen anderen unserer vier Tarife wechseln, ohne erneute Gesundheitsprüfung!

UNIQA Runtime: connected

Runtime status

The extension decides locally, then asks the runtime API for one conversion play.
8:47:07 AM: API reachable, no runtime decision for this interaction
8:47:07 AM: Connected to runtime API
8:46:40 AM: Waiting for first runtime API call
8:46:40 AM: Waiting for first runtime API call
8:46:40 AM: Waiting for first runtime API call
8:46:39 AM: Waiting for first runtime API call

Our approach

Live extension on the real calculator

Detect route family & funnel stage from `uniqua.at` DOM events — honest evaluation vs production

Deterministic coach plays

Intervention rules in `journey-strategy.ts` decide when to coach; the LLM only generates persona behavior for those plays

LLM persona driver

Playwright sessions use Featherless or local Ollama with prompts grounded in the official persona briefings under

Baseline vs coach bulk eval

`uniqua_pipeline.py` executes the 3×4 persona matrix; `report_bulk_runs.py` computes conversion and drop-off metrics (n=12 per mode)

How did we create it?

What have we achieved?

Coach mode improved live funnel performance

in 12 sessions, online
conversion rose from **41.7% to 50.0%**

step detection
improved from **61.5% to 70.8%**

FLOW

4THRIVES

*with 0 added annoyance, 100% trace completeness, and fully reliable runtime rendering

What could be done in another 36 hours

Run 300-session bulk per mode on Leonardo

or locally for stable confidence intervals on conversion uplift

Add intervention A/B variants

per hypothesis (for e.g. two price-reframe copy variants) with seeded persona matrices

Harden selector regression tests

against saved DOM snapshots from
`artifacts/browser-runs/`

Deploy coach-api to App Platform

and point the extension at a shared demo backend
